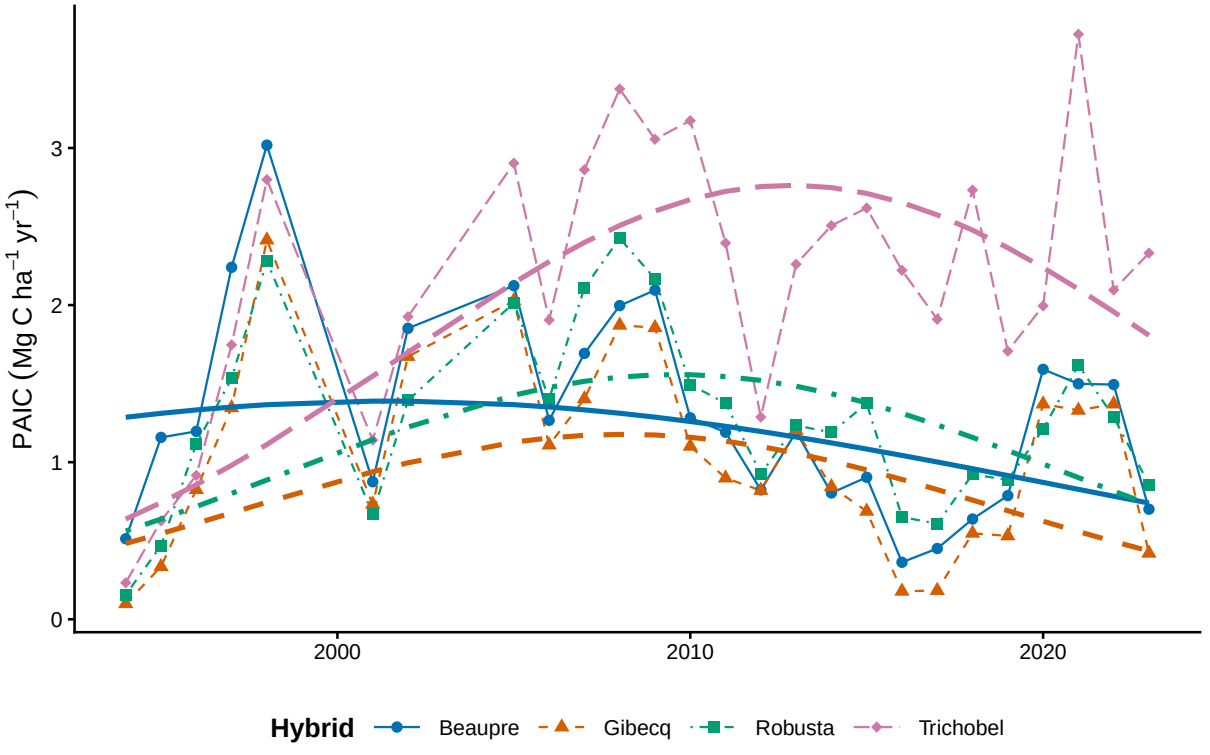
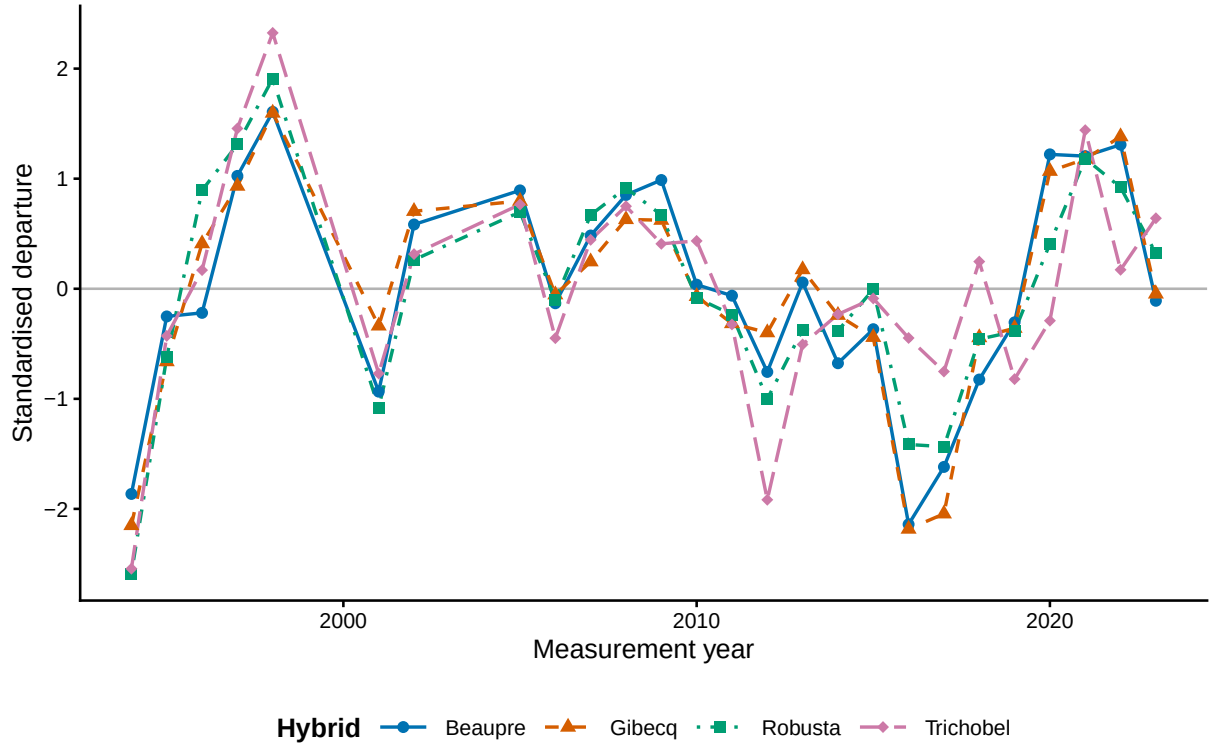
A PAIC and broad trajectories

Thin lines and symbols: observed medians; thick lines: quadratic trends on log PAIC

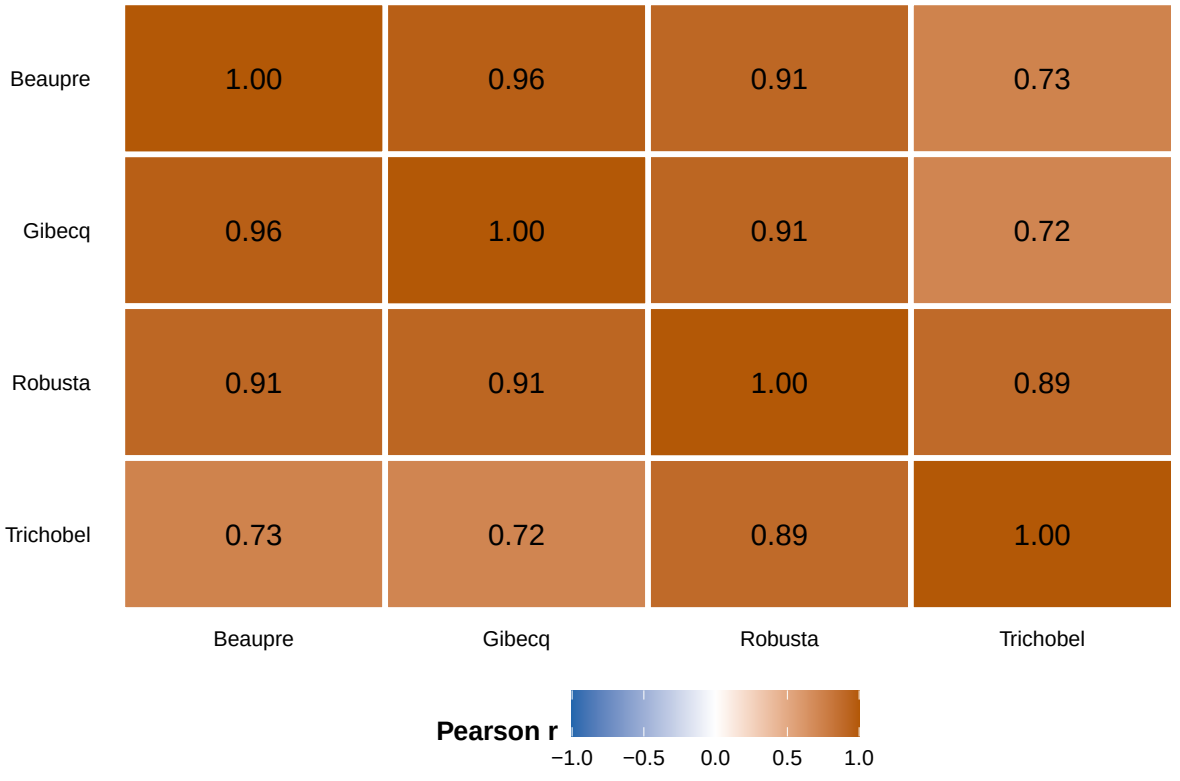


B Departures from each hybrid trajectory

Log PAIC residuals divided by their within−hybrid standard deviation

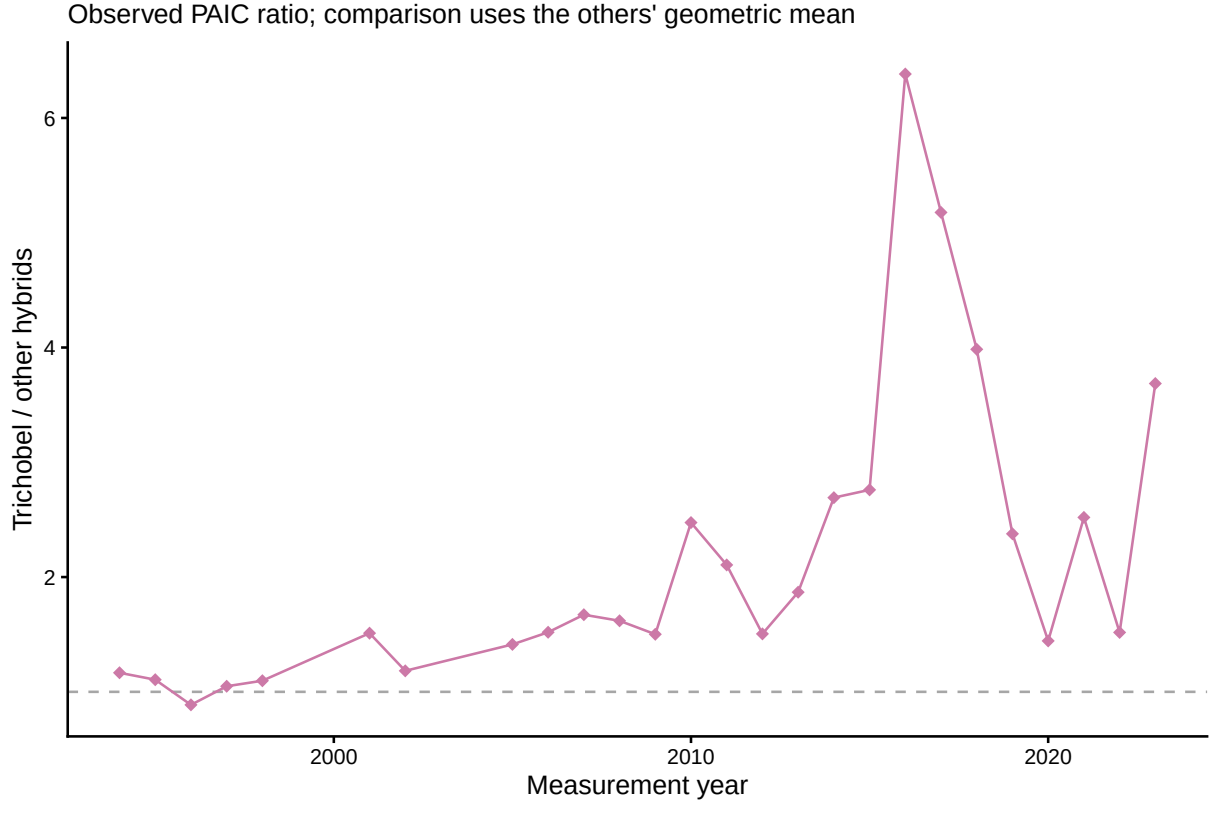


C Correlation of departures



D Trichobel relative to the other hybrids

Observed PAIC ratio; comparison uses the others' geometric mean



DESCRIPTIVE | 26 common positive−response measurement years; tree−level hybrid medians as in the PAIC/MAIC descriptive plot.
Trends fitted separately by hybrid; no shared year effect removed. Lines connect observed visits; missing years are not imputed.
Correlations are descriptive and do not establish weather causation. Linear detrending and legacy−response sensitivity exported.
